FALL 2015

CLICKER QUESTION

Let \mathbf{P} be uniform on $\{1, 2, \dots, 10\}$.

Let $\mathbf{A} = \{2, 3, 5, 7\}$ and $\mathbf{B} = \{1, 3, 5, 7, 9\}$.

What is $\mathbf{P}[\mathbf{A}|\mathbf{B}]$?

(A) $2/5$

(B) $1/2$

(C) $3/5$

(D) $3/4$

CLICKER QUESTION

Let \mathbf{P} be uniform on $\{1, 2, \dots, 10\}$.

Let $\mathbf{A} = \{2, 3, 5, 7\}$ and $\mathbf{B} = \{1, 3, 5, 7, 9\}$.

What is $\mathbf{P}[\mathbf{A}|\mathbf{B}]$?

(A) $2/5$

(B) $1/2$

(C) $3/5$

(D) $3/4$

CONDITIONAL PROBABILITY

For $\mathbf{B} \subseteq \Omega$ and $\mathbf{w} \in \Omega$, the probability of w conditioned on B is

$$\mathbf{P(w|B)} = \begin{cases} \mathbf{P(w)/P(B)} & \text{if } \mathbf{w} \in \mathbf{B} \\ \mathbf{0} & \text{otherwise} \end{cases}$$

Given event $\mathbf{A} \subseteq \Omega$, the probability of \mathbf{A} conditioned on \mathbf{B} is

$$\mathbf{P(A|B)} = \sum \mathbf{P(w|B)}$$

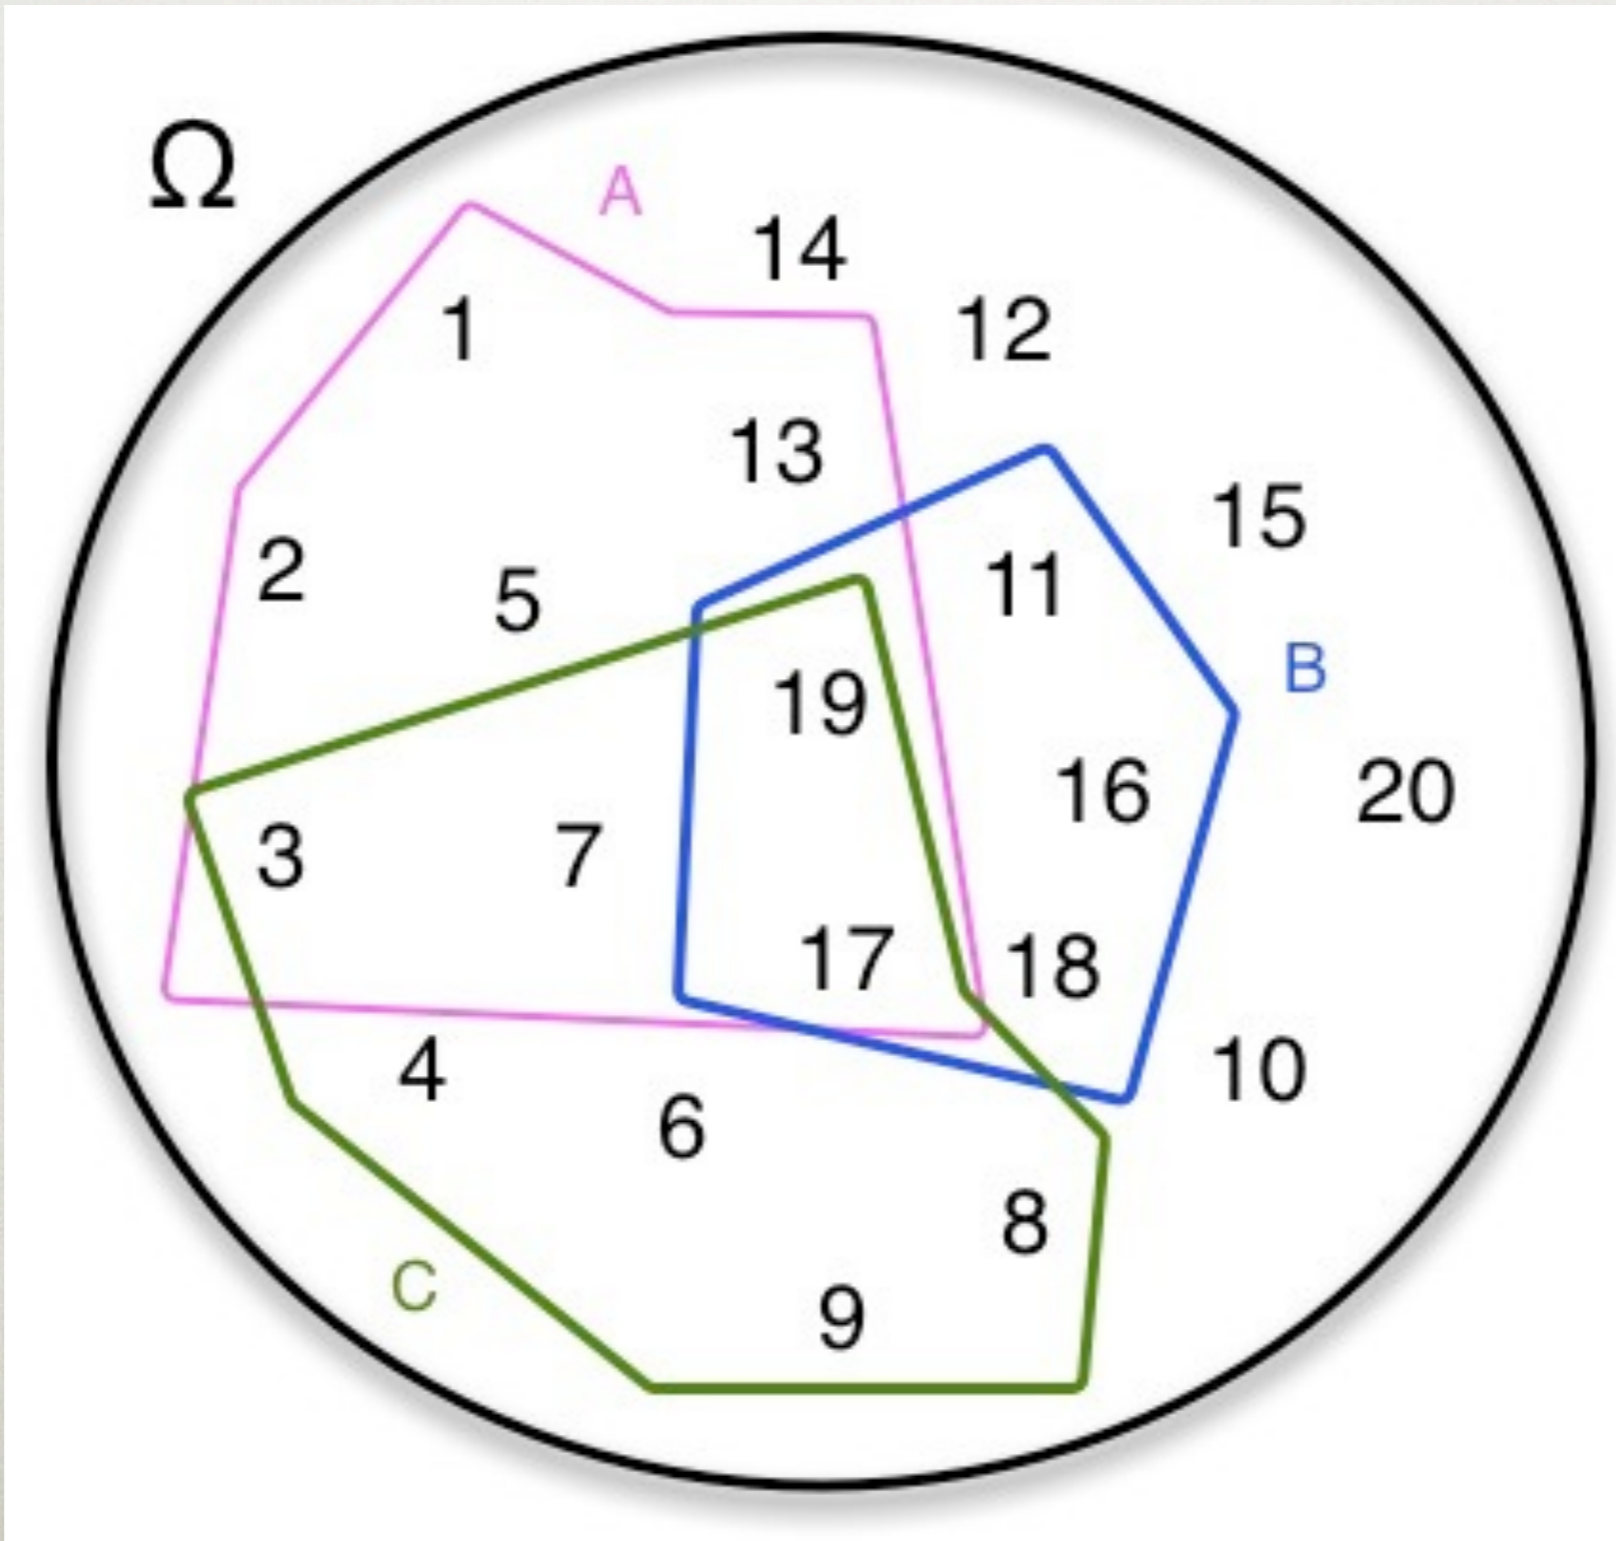

CLICKER EXERCISE

Patients enter a medical clinic when they feel ill. 5% of patients who come in have cancer, and 20% are smokers. By checking records of cancer patients, we know that 50% of cancer patients are smokers.

Suppose a patient enters and is a smoker. What is the probability the patient has cancer?

- (A) **5%**
- (B) **12.5%.**
- (C) **20%**
- (D) **50%.**

INDEPENDENT EVENTS

THE PROBABILISTIC METHOD
